COMPOSITE LIQUIDITY INDEX - PUBLISHED HISTORY

CURRENT BUCKET CONTRIBUTIONS

BUCKET	CONTRIBUTION
central_bank	1.27

MODEL NOTE

Rolling z-score composite across five buckets. 50 is neutral and higher values indicate looser conditions.
Publication remains coverage-gated; missing inputs are not replaced with zero.

Policy & Short Rates

Live confirmed policy and funding-plumbing monitor: SOFR / EFFR / IORB, TGCR / BGCR / GCF / Tri-Party spreads, funding-pressure diagnostics and weekly H.4.1 context. The fixed-contract SOFR futures strip is a separate live page; a meeting-by-meeting FOMC path remains unimplemented.

MAR 28	3.985%	+1.5	+5.0
JUN 28	3.980%	+1.0	+6.0

LIMITATION

These are eight actual fixed quarterly Three-Month SOFR contracts. The page is not a meeting-by-meeting FOMC probability path and must not be read as one.

Rate Decomposition

Decompose nominal yield moves into real-rate and inflation components (identity form via TIPS breakevens or swap form via ZCIS with residual). US curve complex + rolling rate attribution + 2s10s curve decomposition. Uses breakeven identity.

CURRENT TENOR PROFILE						
10Y	4.65%	2.39%	2.26%	+9.5 bp	+6.8 bp	+2.7 bp

IDENTITY

Nominal yield equals real yield plus inflation compensation at each tenor. The decomposition residual is zero by construction. Inputs are aligned on common dates with no proxy substitution.

Curve Regimes

7-regime classification (bull/bear x steepener/flattener/twist/neutral) across nominal, real, and inflation curves on 6 tenor pairs.

DXY	-0.249	+0.215	+1.000

INTERPRETATION LIMIT

This is a descriptive one-trade linkage gauge for SPX, UST 10Y and DXY. It is not causal attribution and is not a forecast.

Sector Rotation & Breadth

Descriptive monitor for the 11 S&P 500 sector indices: absolute and relative performance vs SPX, breadth, cross-sectional dispersion, rotation quadrants, and sector-weight context. Not causal attribution or official SPX return attribution. ETF proxies are excluded from the production model.

LIMITATION

Descriptive monitor using 11 S&P 500 sector indices. Sector weights are context only and must not be described as investor flows or official return attribution.

Sector Contribution Estimate

Approximate SPX sector return contribution using the latest periodic sector weights available on or before each return window start date. Explicit residual reconciliation. Not official index-provider attribution.

63D	2026-05-13 to 2026-08-13	+4.77%	+4.79%	-0.030 pp

ESTIMATE - NOT OFFICIAL ATTRIBUTION

The estimate multiplies the latest periodic sector weight available on or before each window start by each sector's simple return. The residual reconciles the estimate to the actual SPX return. This is not divisor-consistent official index-provider attribution.

Global Index Trend & Market Breadth

Selectable-index trend panel using each index's own cash close and available 50D/200D/100W moving averages. Reference-style advance-decline, 52-week high/low, moving-average breadth, RSI breadth and index put/call panels activate only when the corresponding constituent-level Index_Breadth inputs are supplied; no prox...

52/100 weekly closes

SPX PRICE TREND - OBSERVED CLOSES

CONSTITUENT BREADTH INPUTS MISSING

DATA.xlsx does not contain index-level advance-decline, new 52-week high/low percentages, 50D/200D constituent coverage, RSI breadth or an index-specific put/call series. Those panels are withheld rather than inferred from price, sectors, ETFs or another index.

STATUS - PARTIAL

The selectable Streamlit page uses each requested index's own cash close for the price trend. The workbook currently has about one year of prices, so a true 100-week average is unavailable. An optional long-form Index_Breadth sheet activates the remaining panels only when real source observations are supplied.

Global FY1 Earnings & Valuation

One index dropdown controls the rolling exact-return decomposition and implied FY1 P/E chart. Uses each selected index's own confirmed weekly FY1 consensus EPS (BEST_EPS with 1FY override), matched backward to its latest observed cash close within three calendar days; missing inputs remain Missing data. Not fair val...

METHODOLOGY

Scores are cross-sectional relative rankings. The PDF uses the Board defaults: rates 50% macro / 50% markets; equities 50% four-factor macro / 50% EPS. GDP, inverted CPI, fiscal and terms of trade each contribute 12.5% of the default Equity Score. FCI is context only, is not mapped to indices and contributes 0%. Partial rows are excluded; future-dated rows

CTA Score Backtest

Fixed-specification weekly Top 3 minus Bottom 3 signal evaluation for the current Rates and Equity Scores. Uses a full 90-calendar-day factor lookback and displays every usable period. Limited history, revised macro data and the rates yield-change proxy prevent strategy-validation or P&L claims.

LIMITED-SAMPLE SIGNAL CHECK

Fixed weekly Top 3 minus Bottom 3 specification with a full 90-calendar-day lookback. Equity uses next-week cash-index price returns; FCI is not an input. Rates use minus the next-week 10Y yield change, not total-return P&L. Macro observations are revised rather than vintages, transaction costs are absent, and history begins in February 2026. No Sharpe, drawdown, cumulative P&L or strategy-validation claim is presented.

Model Roadmap & Content Gap

Content gap analysis vs the reference PDF. Shows what is implemented, what is missing, what data is needed, and what should be built next.
